

Instructions

Mounting divider-set for MAXI-systainer®

1. First, insert the two outer (on the right and on the left side), smaller dividers.

2. In order to be able to insert the two inner, smaller dividers, the omissions for the handle will have to be broken off in accordance with the description in the picture (rated breaking point along the groove). Please make sure that the larger omissions of the dividers (upper edge) are always pointing towards the back when inserting the smaller dividers.

3. The final step is inserting the two long dividers. Make sure, that the “rib for stabilisation” of the divider in the back is on the right-hand side and that the “rib for stabilisation” of the divider in the front is on the left-hand side.
